

Process automation

Control technology and remote I/O

Electronic controllers and remote I/Os including electrical peripherals for standard and potentially explosives atmospheres.

☆ Core product range

Valve manifolds

Valve modules with electrical multi-pin, individual, or fieldbus connections or integrated control, with or without electrical inputs and outputs

★ Core product range

Pilot valves

Solenoid valves for controlling pneumatic actuators with Namur interfaces (VDI/VDE 3845) as well as application-specific valves for typical safety applications in process automation.

★ Core product range

Sensor boxes

Digital and analogue limit switch boxes with optical display for quarter turn actuators in standard and potentially explosive atmospheres.

★ Core product range

Positioners

Electropneumatic positioner for control functions in combination with quarter turn actuators.

★ Core product range

Linear drives

Pneumatic linear actuator for opening/closing and control applications with integrated positioner. Suitable for linear valves such as knife gate valves, penstock valves and pinch valves.

Quarter turn actuators

Pneumatic quarter turn actuators according to the rack and pinion or Scotch yoke principle, in aluminium or stainless steel, for automating butterfly valves and ball valves.

★ Core product range

Ball valves and ball valve units

Brass and stainless steel ball valves as single components or ready assembled with a pneumatic actuator.

☆ Core product range

Angle seat valves

Angle seat valves made of gunmetal (red brass) and stainless steel, fully assembled and actuated by a direct supply of compressed air.

★ Core product range

Butterfly valves

Butterfly valves for versatile use in various industry sectors.

Solenoid-actuated media valves

★ Core product range

Pneumatically actuated media valves

Directly operated, pilot operated and force pilot operated media valves in brass and stainless steel for controlling different liquid and gaseous media.

Angle seat and pinch valves for various media, from gaseous to highly viscous and abrasive media.

Compressed air preparation

★ Core product range

Air supply components

★ Core product range

Service unit combinations and individual units for compressed air preparation in two series: MS series and D series (in metal or polymer)

- Fittings
- Tubing (polymer)
- Pipes
- Hoses
- Plug connectors
- Couplings
- Branching modules
- Protective conduit systems
- Accessories.
